This binding is mediated (at least for chondrocytes and osteoblasts. This binding is mediated (at least for chondrocytes and fibroblasts) by the integrin alpha(2)beta(1). May play an important role in the regulation of chondrocyte growth and proliferation (By similarity).

1. SUBURIT: Mostly monomeric (By similarity).

1. SUBCELLULAR LOCATION: Extracellular matrix (By similarity).

1. TISSUE SPECIFICITY: Present in femoral head and rib cartilage, as well as in tendon, Detected in bone marrow.

1. SIMILARITY: BELONGS TO THE SMALL LEUCINE-RICH PROTEOGLYCANS

1. SIMILARITY: CONTAINS 11 LEUCINE-RICH REPEATS (LRR).

THE ADHESION OF PLINJURED VASCULAR SURFACES IN THE ARTERIAL CIRCULATION CRITICAL INITIATING EVENT IN HEMOSTASIS.
SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: PLATELETS AND MEGAKARYOCYTES.
PTM: THE N-TERMINUS IS BLOCKED.
SIMILARITY: CONTAINS 14 LEUCINE-RICH REPEATS (LRR).

mitted (AUG-2001) to the EMBL/GenBank/DDBJ databases.
FUNCTION: Promotes attachment of chondrocytes, fibroblasts, and stepblasts. This binding is mediated (at least for chondrocytes and fibroblasts) by the integrin alpha(2)beta(1). May play an important role in the regulation of chondrocyte growth and proliferation (By similarity).
SUBUNIT: Mostly monomeric. Interacts with collagen type II (By

1 TISSUE SPECIFICITY: EXCRETED BY THE MIDLINE GLIA CELLS AND EVENTUALLY DISTRIBUTED ALONG THE AXONS.

1 SIMILARITY: CONTAINS 7 EGF-LIKE DOMAINS.

1 SIMILARITY: CONTAINS 24 LEUCINE-RICH REPEATS (LRR).

1 SIMILARITY: CONTAINS 1 C-TERMINAL CYSTINE KNOT-LIKE (CTCK) DOMAIN.

1 SIMILARITY: CONTAINS 1 LAMININ G-LIKE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        glia and domains."

EUNCTION: MAY HAVE AN IMPORTANT ROLE IN REGULATING :
EUNCTION: GIGES TO THE TISSUES.

SUBUNIT: FORMS A TERNARY COMPLEX OF ABOUT 140 TO 150
IGF-I OR IGF-I AND IGFBP-3 (BY SIMILARITY).

SUBCELLULAR LOCATION: EXTRACE!LULAR.

SIMILARITY: CONTAINS 21 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                                                                                                                 ; U66900; AAB17270.1; -.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          l number of hits satisfying chosen parameters:
      Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   No
  number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
